Subject: Java Devloper role

Dear Hiring Manager,
I am writing to express my interest in the Software Engineer position at your organization. With over 2.5 years of practical experience, I specialize in backend development and systems programming using Java and C++, along with Python and modern frameworks like Spring Boot and Django.

My strong foundation in Java has been applied in developing secure web services, REST APIs, and Spring-based microservices. I have also used C++ extensively for building performance-critical applications, such as a Redis-like server that handles concurrent client connections efficiently using non-blocking I/O.

During my internships at J.P. Morgan, Walmart, and Moseas, I contributed to solving real-world challenges—from monitoring database performance with Elasticsearch and Kibana to implementing optimized data structures in Java for logistics applications.

I am passionate about building clean, scalable software and thrive in collaborative environments where continuous learning is encouraged. I am excited by the opportunity to contribute my Java and C++ expertise to your engineering team.

Thank you for considering my application. I look forward to the opportunity to further discuss how my skills align with your needs.

Sincerely,
Zafer Mairaj
